

Klover |

Klover is an Incident Management Software-as-a-Service focused on the Intelligent Transportation Systems (ITS) industry. Klover's cloud-based architecture scales to meet the needs of ITS organizations of any size while maximizing visibility, collaboration, and flexibility in your unique operations.

Incident Map

Visibility |

Klover provides a common operating picture of all incidents through multiple views to maximize user efficiency:

- **Task views** enable operators to efficiently move through incident related tasks in the proper order
- **Process views** help Incident Commanders track the progress of incidents
- **Incident views** allow users to quickly find incidents on maps or lists for a common operating picture
- **Reporting and analytics views** utilize Big Data to facilitate decision making

Collaboration |

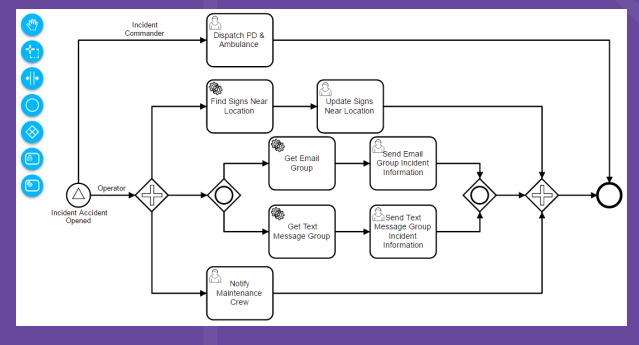

Klover enhances coordination with outside agencies as well as between groups and individuals within your organization.

With Klover:

- Define how your organization manages incidents, interacts with devices, and notifies the public
- Integrate with third party systems and share incident information
- Propel users through incident management tasks

All of this can be done on any connected device from anywhere. At the scene, an Incident Commander can take full control with a tablet in hand. Managers can see the tasks their team members are working on whether they are in the operations center or on the road.

My Tasks

All Tasks

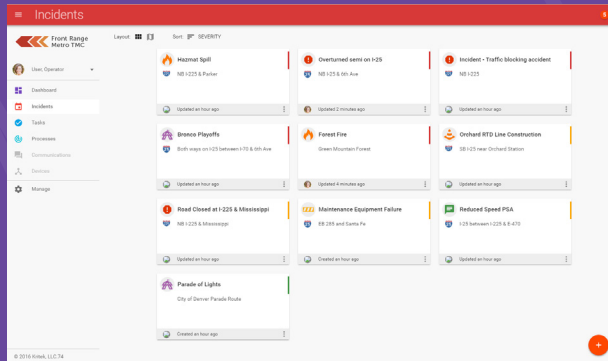

Flexibility |

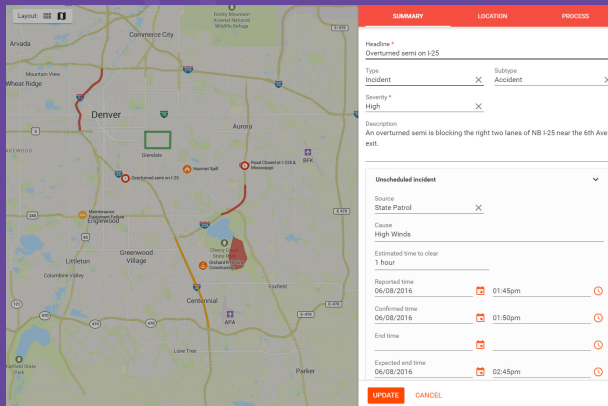

Klover works for you. While we provide experience-based, sensible defaults and out-of-the-box configurations, you always have the ability to change configurations to meet your needs.

- Familiar Traffic Management Data Dictionary (TMDD) based attributes
- Configurable incident types, picklists, custom fields and forms
- Extensible process modeling of your organization's incident management plans
- Flexible, role-based security and permissions

Incident Menu

Incident Creation

Kritek, LLC provides products and services for the Intelligent Transportation Systems industry. Its flagship cloud offering, Klover, is the culmination of more than ten years of successful ITS implementations for state and local governments. Kritek's portfolio now includes a variety of modules to meet the needs of traffic management centers of any size.

**We listen.
We have learned.
We are improving the face of ATMS.**

Modules |

- Contact Management
- Device Management
- Identity Access
- Incident Management
- Mass Notification
